

## ABSTRACT

A letter opener writing instrument device comprising a writing instrument, a pocket clip affixed to the instrument, and a cutting edge operatively positioned between the instrument and pocket clip providing for the cutting of paper by the device. The device may further comprise a spacer and/or a stopper, both affixed between the instrument and the pocket clip, where the spacer may provide space and/or an attachment mechanism and the stopper limits accessibility to the cutting blade preventing damage to a shirt pocket or the like. The pocket clip cutting unit may be provided as a separate unit for its detachable attachment to a writing instrument. A writing instrument may be a fountain pen, ball point pen, mechanical or non-mechanical pencil, marker, and stylii, such as are used with touch-sensitive screens. The sleek, slim design, of the instrument provides for its attractive and comfortable insertion into a shirt pocket.
